Introduction

Psoft inventory software is designed to help small & medium Enterprises (SME) or companies to streamline their business operations. **Psoft** inventory software will help in the sense that the business's sales billing and management will be made much easier and more accurate. Thus increase the business efficiency and profitability.

Psoft is a window based inventory system that include all the aspects of all the SME business. **Psoft** provides facilities to store all the clients' information like its company name, address, phone, fax numbers and person in charge etc. Besides, **Psoft** inventory system also provides all clients' billing systems like Delivery Order, Invoice, cash Sales, Credit Note and Debit Note. We can use the **Psoft** to issue the Delivery Order to our customer and then follow up by issuing the customer the Invoice.

All these business transactions can be entered into the **Psoft** easily through the **Psoft**'s user friendly window menu. And once entered, the data are posted immediately to the respective report, the products and clients' Sales report will be immediately updated. That is to say that once we key in the transaction into **Psoft**, it will immediately tell us the sales state of our business.

Psoft has a strong local support team to help users to implement their inventory system and ensure that the users can apply **Psoft** in their business effectively and efficiently. That means to say users do not have to worry about after purchasing the software and then do not know how to use it, because with **Psoft**, there is always someone in the Hotline to help, with just a call away!!!
